Lineage-specific gene summary

|                            |               |
|----------------------------|---------------|
| Ingroup proteomes          | <b>0</b>      |
| Outgroup proteomes         | <b>12</b>     |
| Proteins scored            | <b>39,513</b> |
| Novelty candidates         | <b>3,729</b>  |
| Gene families              | <b>3,956</b>  |
| Ingroup presence threshold | <b>≥ 75%</b>  |
| Loss candidates            | <b>0</b>      |

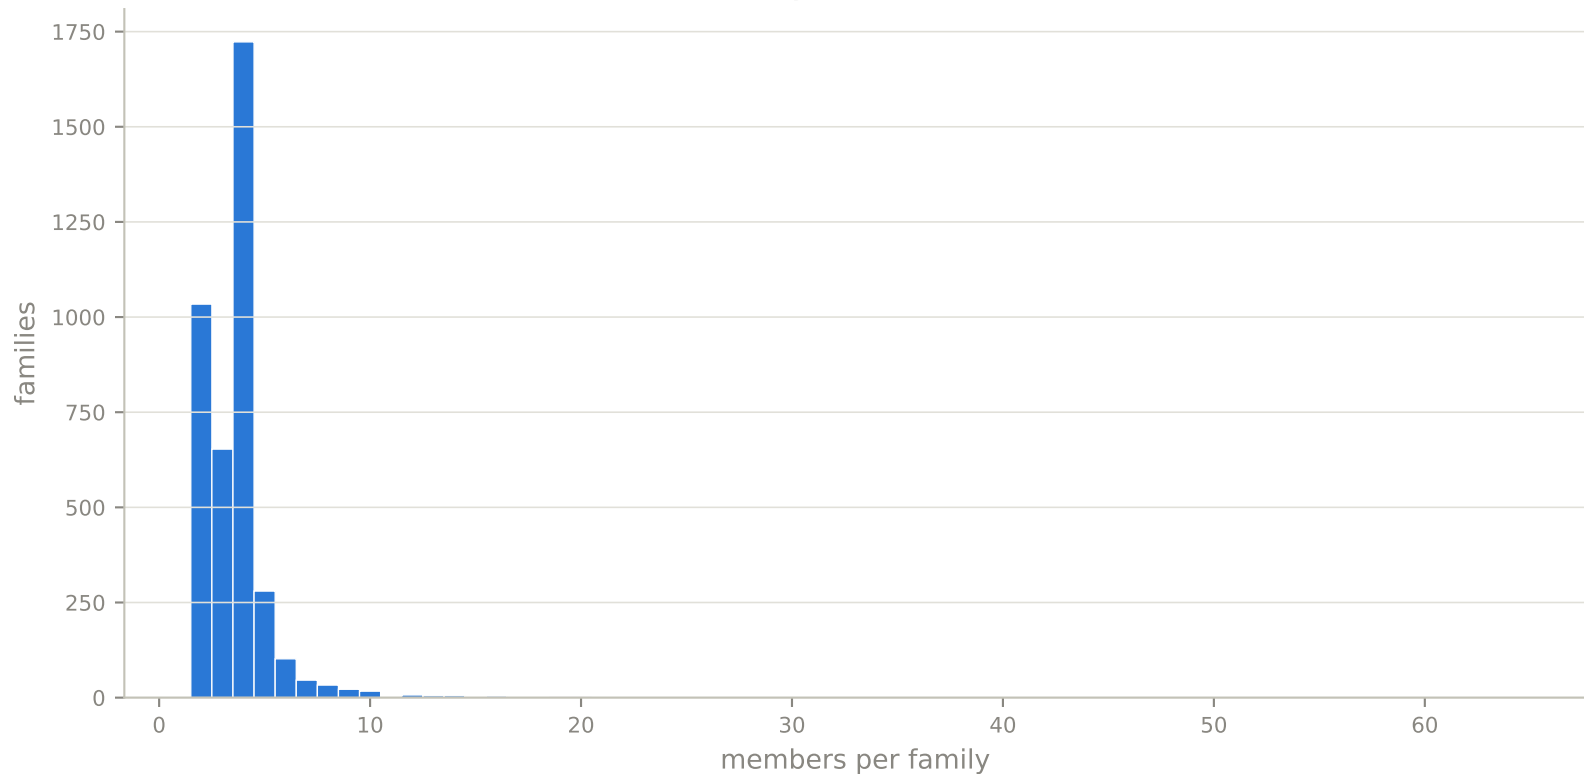

Colour key: blue = protein-search presence · green = TBLASTN genome hit

## Novelty candidates per ingroup species

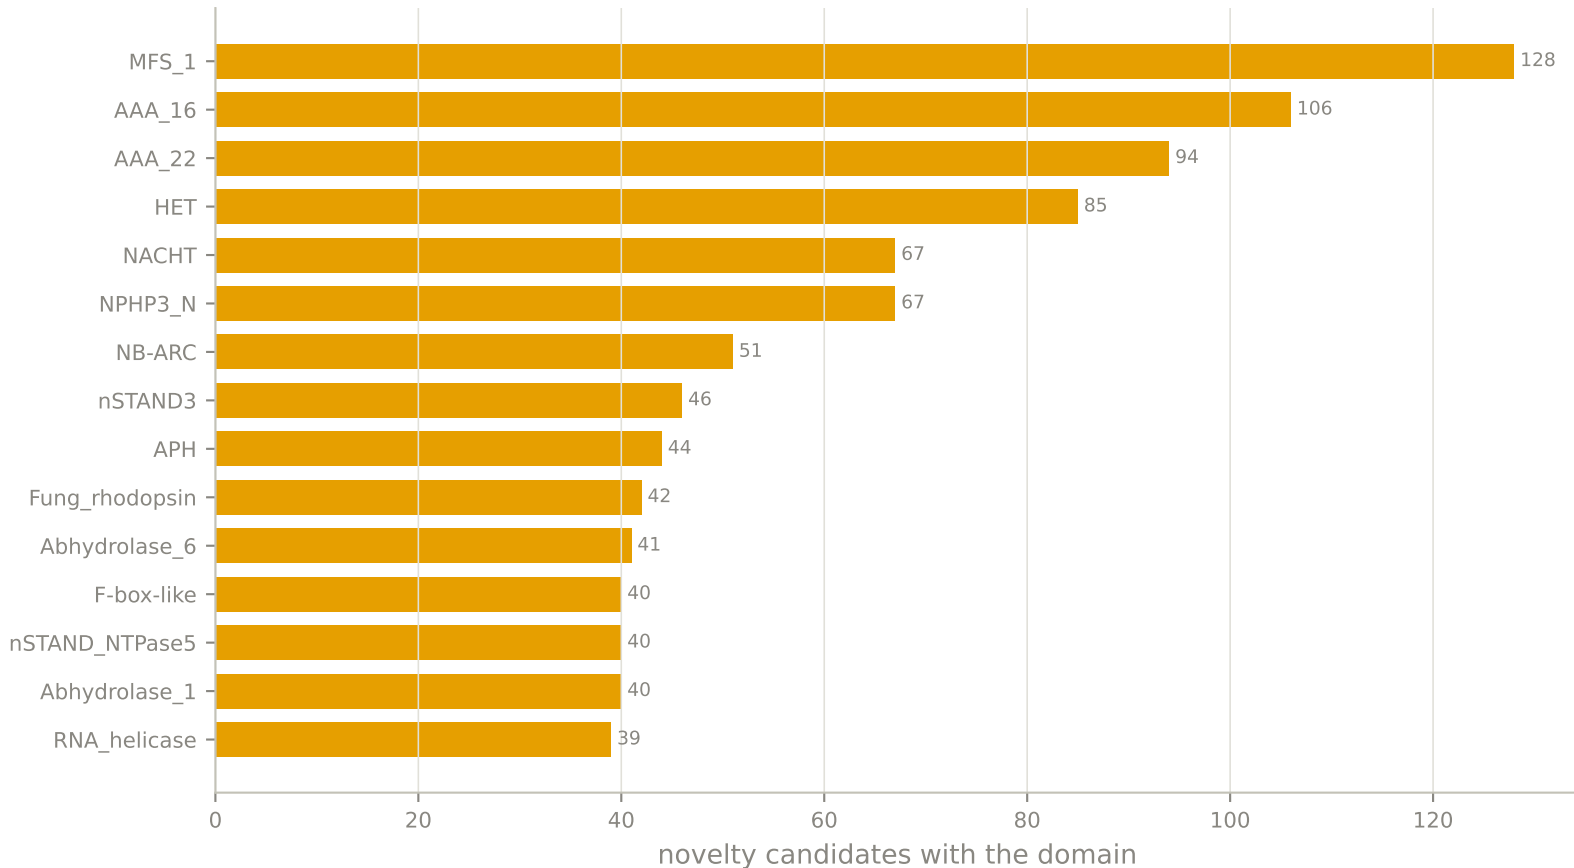

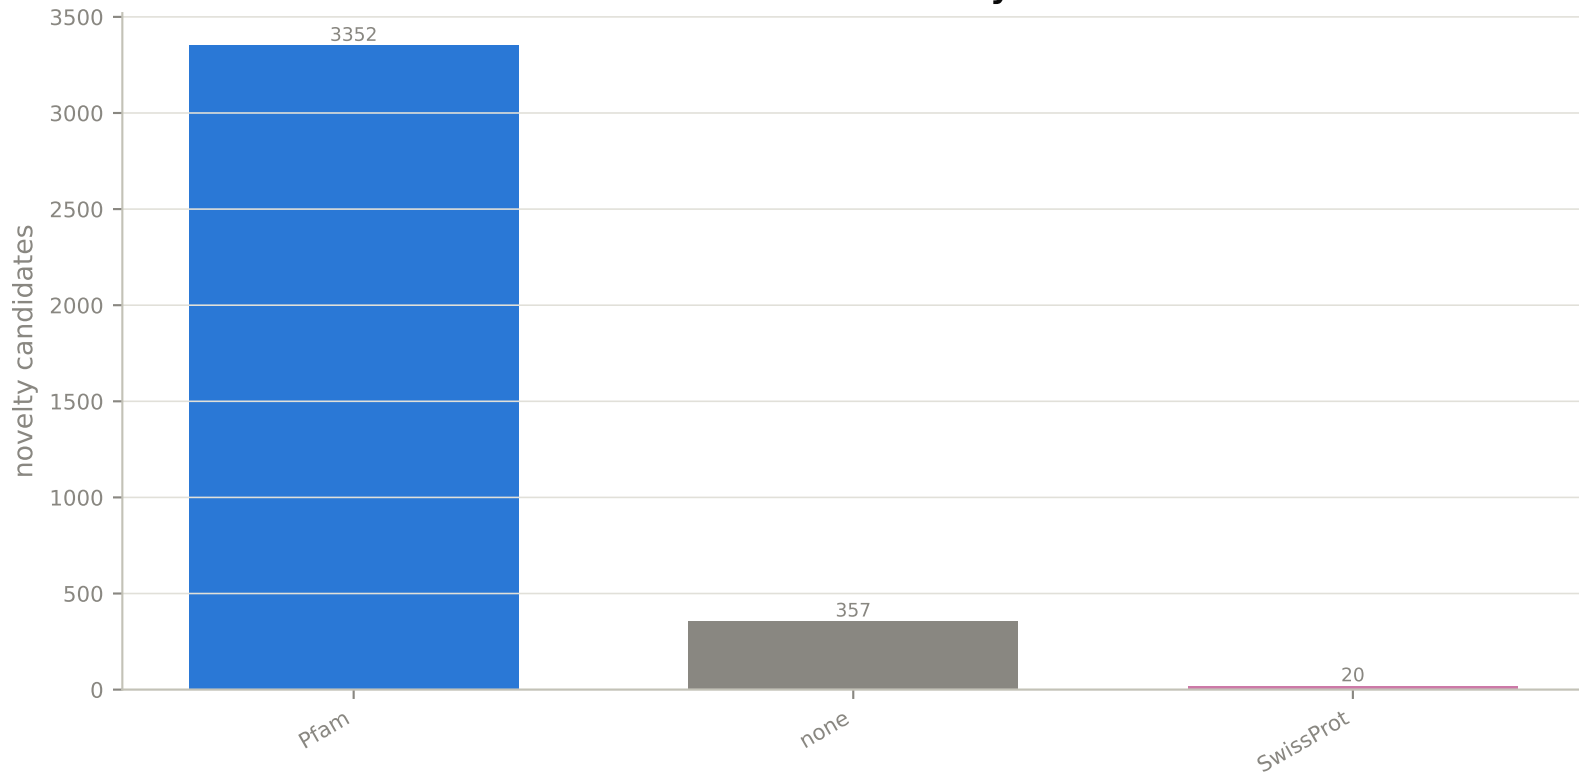

## Gene-family size distribution

## Top Pfam domains among novelty candidates

## Annotation source of novelty candidates

## Candidate gene losses
